Nguyen Van Truong

FLUTTER DEVELOPER INTERN

0338730089 nguyenvantruong1009204@gmail.com https://github.com/TruongHidu

ABOUT ME

Final-year Software Engineering student focused on mobile development, with hands-on experience building cross-platform applications using Flutter, REST APIs, Firebase, and real-time features. Seeking a Flutter Developer Internship to further develop my skills and contribute to real-world applications.

EDUCATION

Hanoi University of Civil Engineering **2022 - Present**

Software Engineering

GPA: 3.1/4.0

CERTIFICATIONS

- TOEIC 875/990

TECHNICAL SKILLS

- **Mobile Development:** Dart, Flutter, Riverpod, RESTful API Integration
- **Architecture & Principles:** Clean Architecture, SOLID, Repository Pattern
- **Backend Familiarity:** Java, Spring Boot, PHP, Laravel, Spring Security, RESTful APIs
- **Databases & Backend Services:** MySQL, Firebase Cloud Firestore, Firebase Realtime Database
- **Development Tools:** Git, Postman, Visual Studio Code
- **AI-Assisted Development:** Codex, Claude, Antigravity
- **Design & Collaboration:** Figma, Jira

WORK EXPERIENCE

BigDataTech | Flutter Developer Intern **Jun 2026 – Sep 2026**

- Designed mobile UI prototypes using Figma.
- Developed responsive Flutter screens based on UI designs.
- Integrated REST APIs and handled data display and user interactions.

PROJECTS

KiotTay – Multi-Tenant Restaurant Management SaaS **Mar 2026 – Jun 2026**

Role: Full-stack Developer | Team of 4

Tech Stack: Flutter, Dart, Riverpod, Laravel 12, PHP 8.2+, React, TypeScript, MySQL, Laravel Reverb, Cloudinary

- Developed a Flutter staff application using Riverpod for order management, table ordering, and kitchen operations.
- Implemented real-time order synchronization between cashier, waiter, and kitchen modules using Laravel Reverb, Echo, and WebSockets.
- Built a multi-tenant SaaS architecture with subscription packages, feature-based access control, and role-based authorization.
- Developed POS workflows for dine-in and takeaway orders, applying State and Strategy design patterns to separate order and business logic.
- Implemented inventory and recipe management, including warehouse transactions and recipe-based ingredient deduction.
- Built QR-based table ordering that allows customers to place orders directly from dynamically generated table QR codes.
- Applied Clean Architecture, Repository Pattern, DTOs, and SOLID principles to separate presentation, business, and data access layers.

Movie Ticket Booking App

Sep 2025 – Dec 2025

Role: Full-stack Developer | Team of 4

Tech Stack: Flutter, Dart, Riverpod, Spring Boot, Spring Data JPA, Spring Security, MySQL, JWT, Firebase, VNPay, Cloudinary

- Developed a Flutter movie booking application using Riverpod for state management, integrating REST APIs for movies, showtimes, seat selection, payments, and booking history.
- Implemented a seat reservation and holding system with conflict prevention, expiration handling, and automatic seat release for incomplete bookings.
- Integrated VNPay for online payments, including payment confirmation, payment failure handling, and retry flows.
- Implemented JWT authentication, role-based access control (RBAC) for Admin/User roles, and Google Sign-In using Firebase Authentication.
- Built backend APIs and administrative features for managing movies, schedules, cinema rooms, seats, promotions, banners, F&B, and payment methods.
- Implemented booking confirmations and reminders using Spring Mail and Firebase Cloud Messaging (FCM), along with QR-code generation for electronic tickets.
- Applied scheduled background jobs to handle expired bookings, release held seats, and send upcoming-showtime notifications.

Movie Streaming App

Jun 2025 – Aug 2025

Tech Stack: Flutter, Dart, Riverpod, Firebase, Cloudinary

- Developed a Flutter movie streaming application using Riverpod for state management.
- Implemented email/password and Google Sign-In authentication with Firebase.
- Built a custom video player with full-screen mode, seeking, and auto-hiding controls.
- Implemented movie search, bookmarking, and real-time comments with threaded replies and reactions.
- Developed user profile management with avatar uploads via Cloudinary.
